

Product Guide

THERMOFOIL SERIES

STANDARD PROFILES

We use several CNC machines equipped with diamond tooling to ensure each door is exactly on size, square and that the profiles are exactly to specification. The profile you order today, will be exactly the same when you purchase an add-on in the future. The next two pages show all of our standard profiles, however we often work with our customers to create custom styles and profiles.

All edge and inside profiles are interchangeable for no extra charge. You can request dimensioned drawings of any of the profiles from customer service. We can also adjust the profiles to meet your custom designs.

Keep in mind that standard **Stile & Rail Widths and Panel Depths** vary between all styles. These features are adjustable, but make sure you understand the specifications of the style you are ordering. Sales and Customer Service would be happy to answer any questions.

Rail widths may be reduced on drawer fronts, depending on the height and style. This can be due to machine or tooling limitations or just a style choice we have made. Let us know if you need something specific and we will work to make it happen.

Product Guide

THERMOFOIL SERIES

FLAT PANEL DOOR STYLES (GROOVED PANELS)

V-grooving can be applied to any flat surface, and the specifications of the grooving are flexible. Our Beaded option is simply two adjacent V-grooves which creates the beaded effect.

Our standard V-groove is 1/8" wide. The spacing between varies based on the door style, and is adjustable upon request.

LANCASTER II V-GROOVE

Inside Profile	Lancaster II V-groove
