**Step 1** – Obtain Plan View from your Designer. This will serve as your blueprint to build.

**Step 2** – Staging the area. Organizing your parts and pieces is crucial to the build. Sort wood and hardware pieces by either room, by piece size or both.

**Step 3** – Build your system according to the designers plan view and notes.

**Disclaimer:** Please note, there are no direct build instructions or videos pertaining to your exact build. The videos listed below are a general overview as all parts can be configured differently in anyone’s design. Some videos may be out of date.
