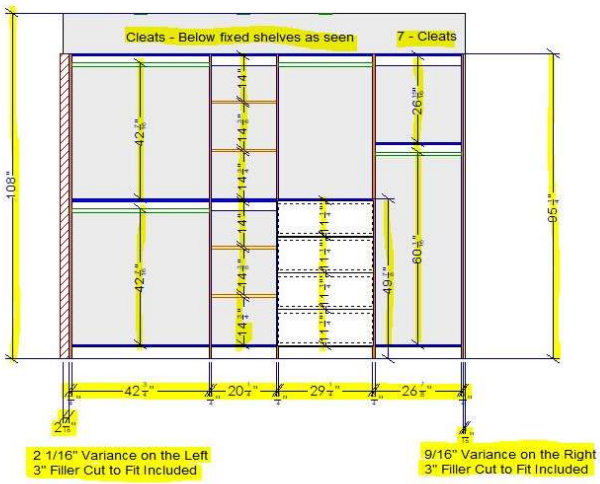
Plan View



Step 1 – Obtain Plan View from your Designer. This will serve as your blueprint to build.

Step 2 – Staging the area. Organizing your parts and pieces is crucial to the build. Sort wood and hardware pieces by either room, by piece size or both.

Step 3 – Build your system according to the designer's plan view and notes.

Disclaimer:

Please note, there are no direct build instructions or videos pertaining to your exact build. The videos listed are a general overview as all parts can be configured differently in anyone's design.
